PROFILE

Computer Science undergraduate (CGPA 3.60/4.00, expected graduation 2027) with hands-on experience shipping full-stack web applications end-to-end, including Voyage Vibe, a travel-planning platform integrating the Groq/Llama AI API and Google Maps API. Seeking a Software Engineering internship to apply proven build-and-ship skills to production systems.

EDUCATION

Bachelor of Computer Science

Expected May – Aug 2027

Management & Science University (MSU), Shah Alam | CGPA: 3.60/4.00

Relevant Coursework: OOP, Database Systems, Software Engineering, Computer Networks, Web Development, Network & Data Security

Diploma in Game Design

Apr 2020 – Feb 2023

Management & Science University (MSU), Shah Alam

TECHNICAL SKILLS

Languages: Java, Python, JavaScript, TypeScript, C++, SQL, PHP

Web & APIs: REST APIs, FastAPI, Next.js, WordPress, Tailwind CSS, JWT Auth, Google Maps API, AI API Integration (Groq/Llama)

Databases: PostgreSQL, MySQL, ChromaDB (vector store), Database Design & Normalization

Tools & Platforms: Git/GitHub, VS Code, Unreal Engine 5, Streamlit, Ollama (local LLMs), Vercel, TCP/IP Networking

PROJECTS

Smart Travel Management System — Voyage Vibe

PHP, JavaScript, MySQL, WordPress, REST APIs, AI API Integration, Google Maps API, Git/GitHub

- Built a responsive travel-planning web application using PHP, JavaScript, and MySQL, with WordPress and Elementor powering the front end
- Integrated the Groq/Llama AI API via REST endpoints to generate personalized itineraries based on destination, budget, duration, and travel preferences
- Implemented interactive route planning and mapping with the Google Maps API, and designed the MySQL schema to store user itineraries and trip data
- Tested and debugged front-end functionality and API integrations across devices; used Git/GitHub for version control throughout development

Java-Based Inventory Management System

Java, MySQL, Object-Oriented Programming

- Developed a desktop inventory management system in Java using OOP design principles and a normalized MySQL database schema for inventory tracking

Internship Application Tracker

FastAPI, PostgreSQL, JWT Authentication, HTML, Tailwind CSS, JavaScript

- Built a full-stack internship application tracker with a FastAPI + PostgreSQL backend and a custom HTML/Tailwind/JavaScript frontend to log and monitor applications across multiple job tracks
- Implemented JWT-based authentication and RESTful API endpoints for secure, user-specific access to application data

Offline RAG Document Q&A Assistant

Python, Streamlit, ChromaDB, Sentence-Transformers, Ollama

- Built a fully offline Retrieval-Augmented Generation (RAG) system that answers questions from uploaded PDFs using a locally-run LLM (Ollama/Llama 3.2), with no API costs or internet dependency
- Designed a pipeline combining chunked text extraction, local embeddings, and ChromaDB vector search to ground answers in retrieved content, and used content hashing to skip redundant re-processing of previously uploaded files

3D Game Development — Final Year Project (Diploma)

Unreal Engine 5, C++, Blueprints

- Developed a 3D game in Unreal Engine 5, combining C++ and Blueprints for gameplay systems and interactive UI
- Optimized rendering performance for mid-range hardware and presented the project at a university exhibition to academic staff and industry representatives

EXPERIENCE

Graphic Designer, Social Media Coordinator & IT Support

Mar 2023 – Oct 2024

Advance Group (AIA)

- Supported a fleet of 10–30 end-user workstations, resolving hardware/software issues and standardizing Windows-based configurations to reduce recurring support tickets
- Designed digital marketing assets across 10+ campaigns, lifting click-through rates by 10% through iterative A/B testing of creative variants
- Grew social media engagement by 10–25% by planning and executing targeted content strategy across platforms
